W.H. Weinberg, *Pasadena, CA*
J.M. White, *Austin, TX*
Xie Xide, *Shanghai, China*
J.T. Yates, *Pittsburgh, PA*

Scope:

Applied Surface Science is concerned with the *microscopic* understanding of the synthesis and behaviour of surfaces and interfaces. The field comprises theoretical and experimental studies which elucidate physical and chemical processes at surfaces, interfaces and in thin films. These include: growth and epitaxy of single or multiple layers, oxidation, reactivity as well as surface modification by directed energy deposition (lasers, ion or electron beams) or other techniques (i.e. plasma etching). Important areas in the field are electronic materials (i.e. semiconductors and semiconductor structure, organic films, ceramics) and chemical processes at surfaces (catalysis, corrosion, reactivity).

Information for Authors:

Contributions shall be written in English and should be submitted in triplicate directly to the Editors. Detailed information on the preparation of manuscripts may be found on the last page of each volume.

All manuscripts originating in the Americas, Japan and Australasia should be submitted to:

Dr. L.C. Feldman
Room 1D-145
AT&T Bell Laboratories
Murray Hill, New Jersey 07974, USA

FAX: +1-201-582 2783

All manuscripts originating in Europe, Middle East, Africa and Asia (except Japan) should be submitted to:

Professor W.F. van der Weg
Department of Atomic and Interface Physics
University of Utrecht
P.O. Box 80.000, 3508 TA Utrecht, The Netherlands

FAX: +31-30-531 601

BITNET: VDWE@HUTRUU51. BITNET

Please do not use telefax for the transmission of manuscripts.

All correspondence with the publisher regarding manuscripts accepted for publication should be addressed to:

Applied Surface Science Technical Editors
P.O. Box 103
1000 AC Amsterdam
The Netherlands

FAX: +31-20-5862 580

Applied Surface Science is published monthly. For 1990, 7 volumes have been announced. The subscription price for these volumes is Dfl. 1995.00 (US\$ 997.5). Postage and handling amount to Dfl. 196.00 (US\$ 98). Therefore the total price is Dfl. 2191.00 (US\$ 1095.5). The price for a combined subscription to the 1990 volumes of *Applied Surface Science*, *Surface Science* and *Surface Science Reports* is Dfl. 8800.00 (US\$ 4400), including postage and handling. The Dutch guilder prices are definitive; the currency equivalents are for your guidance only. Subscriptions should be sent to the Publisher, Elsevier Science Publishers B.V., Journals Department, P.O. Box 211, 1000 AE Amsterdam, or to any subscription agent or bookseller. Claims for issues not received should be made within three months of publication. If not, they cannot be honoured free of charge.

No part of this publication may be reproduced, stored in a retrieval system or transmitted in any form or by any means, electronic, mechanical, photocopying, recording or otherwise, without the written permission of the Publisher, Elsevier Science Publishers B.V., P.O. Box 103, 1000 AC Amsterdam, The Netherlands.

Special regulations for authors - Upon acceptance of an article by the journal, the author(s) will be asked to transfer copyright of the article to the Publisher. This transfer will ensure the widest possible dissemination of information.

Submission to this journal of an article entails the author's irrevocable and exclusive authorization of the Publisher to collect any sums or considerations for copying or reproduction payable by third parties (as mentioned in article 17 paragraph 2 of the Dutch Copyright Act of 1912 and in the Royal Decree of June 20, 1974 (S. 351) pursuant to article 16b of the Dutch Copyright Act of 1912) and/or to act in or out of Court in connection therewith.

Special regulations for readers in the USA - This journal has been registered with the Copyright Clearance Center, Inc. Consent is given for copying of articles for personal or internal use, or for the personal use of specific clients. This consent is given on the condition that the copier pays through the Center the per-copy fee stated in the code on the first page of each article for copying beyond that permitted by Sections 107 or 108 of the US Copyright Law. The appropriate fee should be forwarded with a copy of the first page of the article to the Copyright Clearance Center, Inc., 21 Congress Street, Salem, MA 01970, USA. If no code appears in an article, the author has not given broad consent to copy and permission to copy must be obtained directly from the author. All articles published prior to 1981 may be copied for a per-copy fee of US\$ 2.25, also payable through the center. (N.B. For review journals this fee is US\$ 0.20 per copy per page.) This consent does not extend to other kinds of copying, such as for general distribution, resale, advertising and promotion purposes, or for creating new collective works. Special written permission must be obtained from the Publisher for such copying.

No responsibility is assumed by the Publisher for any injury and/or damage to persons or property as a matter of products liability, negligence or otherwise, or from any use or operation of any methods, products, instructions or ideas contained in the material herein. Although all advertising material is expected to conform to ethical standards, inclusion in this publication does not constitute a guarantee or endorsement of the quality or value of such product or of the claims made of it by its manufacturer.

This volume is printed on acid-free paper.

INSTRUCTIONS FOR AUTHORS

Contributions must be written in English and should have an abstract. The original manuscript (with original figures) and two duplicate copies should be submitted to the editor. All manuscripts originating in the Americas, Japan and Australasia should be submitted to L.C. Feldman. All manuscripts originating in Europe, Middle East, Africa and Asia (except Japan) should be submitted to W.F. van der Weg. See inside front cover for the addresses.

Rapid publication: Short papers, for which rapid publication is appropriate, may be submitted as a "Letter". The manuscripts should not exceed 1000 words in length, contain a modest number of illustrations and a short abstract.

Length of manuscript: Typically 10 pages of manuscript and 4 figures will produce roughly 5 printed pages (count title page, text pages, tables and figure captions as manuscript pages).

Page charge and reprints: There is no page charge and 25 reprints of the article will be supplied free of charge. Additional reprints may be ordered from the publisher. An order form will be sent to contributors together with the proofs.

Preparation of manuscripts

Manuscripts should be typed throughout with double line spacing and wide margins on numbered pages.

The title page(s) should contain, in addition to the article title, author(s) names and affiliations, the text of related footnotes and the text of the abstract. Indicate which author will act as contact author and provide FAX No., telephone No. and telex No., if available.

Tables should be typed on separate sheets at the end of the manuscript. In addition to its serial number, each table should have a sufficiently detailed heading or caption to explain the data displayed in it.

Figures should be numbered and their captions listed together at the end of the manuscript.

References in the text to other publications should be numbered consecutively within square brackets, for example: "...and attributed to OH recombination [1]." and listed together at the end of the text, for example:

- [1] C. Nöbl, C. Benndorf and T.E. Madey, *Surf. Sci.* 157 (1985) 29.
- [2] D.R. Baer and M.T. Thomas, *Appl. Surf. Sci.* 26 (1986) 150.
- [3] A. Kahn, *Surf. Sci. Rep.* 3 (1983) 193.
- [4] W. Hirschwald, in: *Current Topics in Materials Science*, Vol. 7, Ed. E. Kaldis (North-Holland, Amsterdam, 1981) ch. 3, p. 148.
- [5] R.J. Madix, in: *The Chemical Physics of Solid Surfaces and Heterogeneous Catalysis*, Vol. 4, Eds. D.A. King and D.P. Woodruff (Elsevier, Amsterdam, 1982) p. 1.

References to unpublished or not readily accessible reports should be avoided. In the case of multiple authorship all authors should be listed in the references provided they number less than ten. Only in the case of more than ten authors is the first author et al. acceptable.

Formulae in the manuscript should be typed with particular consideration given to characters that may be misinterpreted, e.g.

I (cap.), l (el), 1 (one), ' (prime)	c, C; k, K, κ (kappa); p, P, ρ (rho)
o (lower case), O (cap.), 0 (zero), ° (deg)	u, v (lower case), ν (nu), V (cap.)
× (times), x (lower case), X (cap.)	Σ (sigma), Σ (sum); Π (pi), Π (product); etc.

If necessary, unusual symbols should be explained in pencil in the margin.

Vectors should be indicated by a wavy underlining, and will be printed in bold-face italics.

Preparation of figures

The publisher requires a set of good quality drawings and photographs to produce the printed line figures and half-tone plates in the journal. Photographic copies ("glossy prints") of drawings are also acceptable for the line figures if they have been sharply focused and evenly exposed. As a rule, Xerox copies cannot be accepted. Original drawings and photographs will be returned after publication of the paper.

Line figures: The drawings or glossy prints supplied for the line figures should be 1.5–3 times larger than the printed size of the figures and should contain all the required, carefully applied lettering.

Figures are preferably reduced to a single column width (7.6 cm) unless their complexity, large width-to-height ratio, or need to display special detail makes a larger format necessary (max. printed width ~ 20 cm). Inappropriately sized lettering on a figure may prevent its reduction to the size optimum for its information content. The lettering used on a drawing should be chosen so that after reduction, the height of numbers and (capital) letters falls within the range 1.2–2.4 mm. Care should be exercised in choosing the pen width of machine-plotted graphs. Frequently lines in these figures are too fine compared to the area of the figure.

Shaded areas in line figures should be shown by means of cross-hatching (or a matrix of dots) rather than a continuous grey "wash". Cross-hatching, after reduction, of density less than ~ 25 lines/cm is satisfactory.

Half-tone plates: The photographs supplied for reproduction should be unmounted unless they form part of a composite figure and they should have a somewhat greater contrast than is desired in the printed figure. It is important that the photographs supplied are not already screened (overprinted with the point-matrix used by printers) or moiré patterns will form when they are screened for a second time. When necessary, the top side of a photograph should be marked on the back. A reduction factor should be recommended for a photo when it is not obvious what detail in the photo is of interest.

Colour plates: Illustrations can be printed in colour when they are judged by the Editor to be essential to the presentation. The Publisher and the Author will each bear part of the extra costs involved. Further information concerning colour illustrations and the costs to the author can be obtained from the Publisher.
